RAVITEJA MATAM

9440059982 |ravitejamatam.314@gmail.com|

Professional Summary

QA Automation Engineer with **6+ years of experience** in Automation, Manual, and API Testing. Skilled in **Selenium WebDriver, Core Java, Playwright, TestNG, Maven, Jenkins, Git, Postman, Rest Assured and Azure DevOps**. Experienced in developing **Data-Driven and Hybrid Automation Frameworks**, executing Functional, Regression, Integration, and API Testing, and working in **Agile/Scrum** environments with strong knowledge of **STLC, SDLC, and CI/CD.**

Skills

- **Methodology and project Management:** Regression Testing, functional Testing and Integration testing Test Documentation, SDLC, STLC, Defect/Bug Life cycle, agile methodologies, DevOps, test management
- **Languages:** Core Java
- **IDE:** Eclipse
- **API Testing Tools:** Postman, REST Assured
- **Test Management Tools:** Jira, Microsoft Azure
- **Automation Tools:** Selenium WebDriver, TestNG, Maven, Playwright
- **Frameworks:** Data-Driven Testing, Hybrid Framework
- **CI/CD & Build Tool:** Jenkins, Git, Git huB
- **Operating System:** Windows 7 ,8 ,10,11

Work History

System Analyst - Automation - Vistex Asia Pacific Private limited **01/2023 to Current**

- Developed and maintained 250+ Selenium WebDriver automation scripts using Java, TestNG, Maven, and Page Object Model (POM), reducing manual regression testing effort by 70%.
- Automated end-to-end functional, regression, smoke, and sanity test scenarios across multiple web applications, improving test execution efficiency by 60%.
- Designed and executed API validation tests using Postman, validating REST APIs, request/response payloads, authentication, and business workflows with 95%+ test coverage.
- Integrated automation suites with Jenkins CI/CD and managed source code using Git, enabling scheduled execution and reducing build verification time by 50%.
- Logged, tracked, and validated 200+ defects using Azure DevOps, collaborating with cross-functional Agile teams to ensure timely defect resolution and high-quality software delivery.

Software Engineer – Manual + Automation - Wipro **01/2022 to 06/2022**

- Automated 100+ web application test cases using Selenium WebDriver, Java, and TestNG, improving regression testing speed by 55%.
- Developed data-driven automation scripts using Excel and TestNG Data Providers, increasing automation coverage and minimizing script maintenance effort.
- Executed functional, regression, integration, smoke, and sanity testing, ensuring application stability across multiple releases with 98% execution accuracy.
- Performed REST API testing using Postman, validating request/response data, HTTP status codes, and backend integrations to improve service reliability.
- Managed defects using Azure DevOps, participated in Agile Scrum ceremonies, and collaborated with developers to achieve timely sprint deliverables.

Quality Analyst – Manual Testing - COA Network India Private Limited **12/2019 to 01/2022**

- Designed and executed 400+ manual and automation test cases for web applications, covering functional, regression, integration, and system testing, improving overall product quality.
- Built and maintained reusable Selenium WebDriver automation scripts using Java, TestNG, Maven, and Hybrid/Data-Driven Frameworks, reducing repetitive testing effort by 65%.
- Performed API testing using Postman and validated backend services, request/response payloads, and database consistency to ensure end-to-end functionality.

- Reported and tracked 300+ defects using FogBugz, performing root cause analysis and regression validation to ensure effective defect closure.
- Used Git for version control and actively participated in agile development processes, collaborating with developers and business analysts to deliver quality software within sprint timelines.

Projects

Project 1: NEC & GPC - Vistex Asia Pacific Private limited

Project Description: Worked on SAP applications supporting pricing, rebates, incentives, and contract management for enterprise customers. The project involved automating business workflows and validating end-to-end functionality to ensure reliable and high-quality releases.

- Developed and maintained 200+ Selenium WebDriver automation scripts using Java, TestNG, Maven, and Data-Driven Framework, improving automation coverage by 40% and reducing regression execution time by 30%.
- Automated functional, regression, integration, UAT, and cross-browser testing across Chrome, Firefox, Edge, and Safari, achieving 95% defect detection before production releases.
- Integrated automation suites with Jenkins CI/CD and managed source code using Git, reducing manual build effort by 30% and improving release efficiency.
- Executed REST API validation using Postman and verified business workflows, ensuring reliable backend integrations and application stability.
- Logged, tracked, and validated 200+ defects using Azure DevOps, collaborating with agile teams to reduce defect resolution time by 30% and support successful Go-Live activities with zero critical production issues.

Project 2: Metro Bank - Wipro

Project Description: Worked on digital banking applications to validate customer account management and banking services. The project focused on UI automation, API validation, and ensuring seamless functionality across multiple browsers.

- Automated 150+ web test scenarios using Selenium WebDriver, Java, TestNG, and Maven, increasing automation coverage by 35%.
- Developed and maintained a Data-Driven Automation Framework, reducing script maintenance effort by 30% and improving test reusability.
- Performed API testing using Postman, validating REST services, request/response payloads, authentication, and backend integrations, reducing integration defects by 25%.
- Executed cross-browser testing on Chrome, Firefox, and Internet Explorer, ensuring consistent application behavior across supported environments.
- Participated in Agile Scrum ceremonies, executed sprint testing, and collaborated with developers to improve on-time delivery of quality releases by 20%.

Project 3: ITeleCenter & Focal Point - COA Network India Private Limited

Project Description: Worked on telecom customer support and communication management applications for validating email services and toll-free number management. The project involved UI automation, API validation, and end-to-end functional testing.

- Automated 180+ end-to-end functional and regression test cases using Selenium WebDriver, Java, TestNG, and Hybrid/Data-Driven Framework, reducing manual testing effort by 40%.
- Designed reusable automation components and Data-Driven Frameworks for multiple email platforms, improving execution efficiency by 60%.
- Performed REST API testing using Postman, validating HTTP status codes, response payloads, and backend services, reducing API defects by 30%.
- Reported and managed 150+ defects using FogBugz, ensuring complete defect lifecycle management and reducing issue resolution time by 30%.
- Conducted cross-browser compatibility testing across Chrome, Firefox, and Internet Explorer, improving application consistency and user experience by 20%.

Rewards and Recognition

- Received management recognition for developing a robust Data-Driven Automation Framework.
- Earned GEM Awards (4 times) for maintaining reliable automation scripts across two projects.

Education

B. Tech: Mechanical Engineering 06/2017

CMR Institute of Technology - Hyderabad
